Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

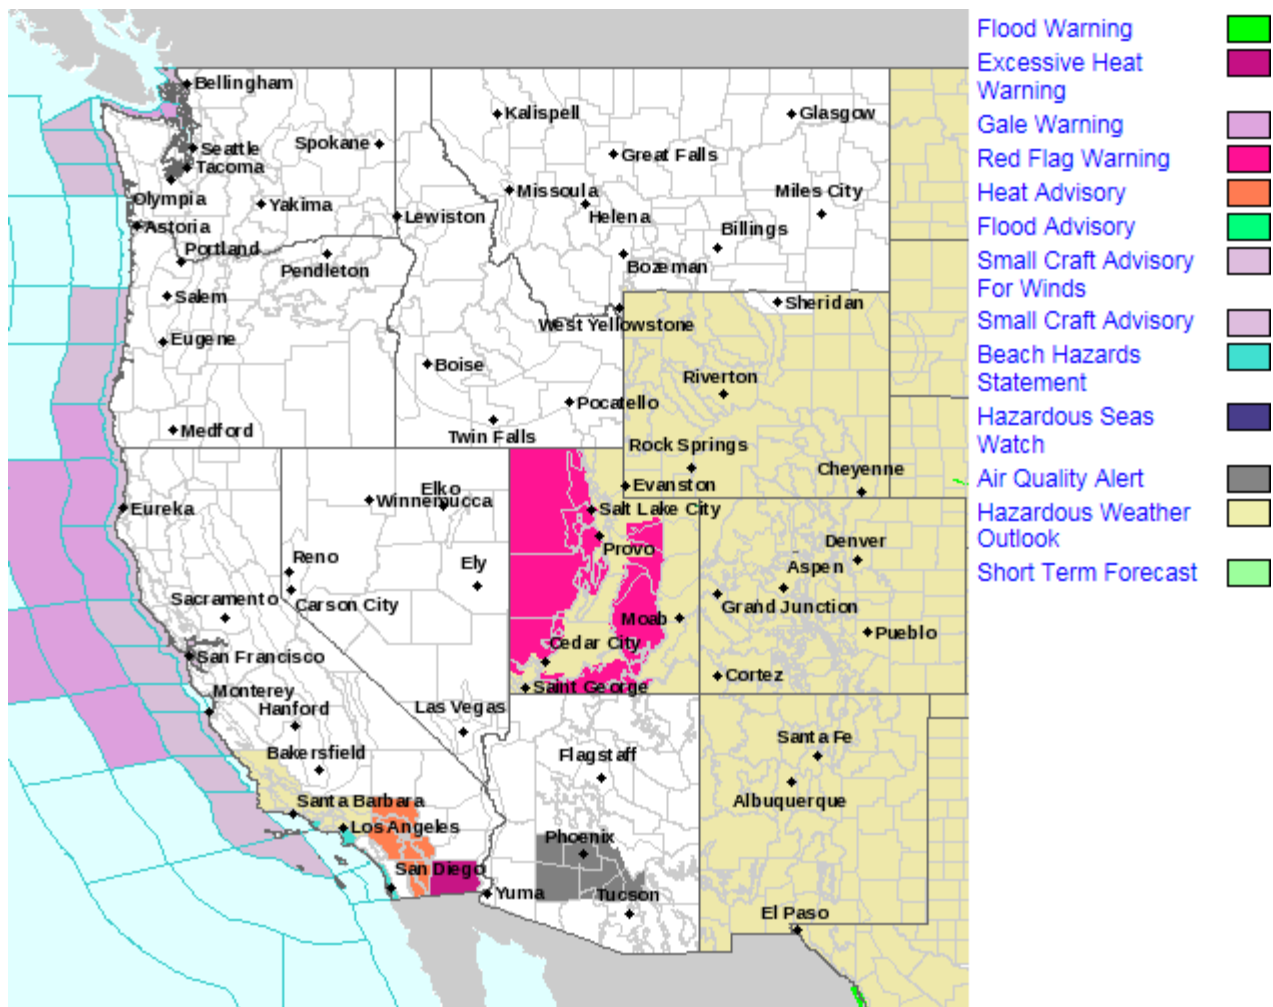

Northern California weather remains largely governed by strong high pressure over the Great Basin and 4 Corners regions. Hot, dry weather will continue through the end of the week with triple digit afternoon high temperatures right around 105 for the warmest areas and low afternoon RH with mostly moderate overnight RH recovery. The very southern edge of a large Gulf of Alaska low pressure system will begin to affect Northern California the end of the week with temperatures cooling just a few degrees in the warmest areas. A bit more moisture will be over the NW portion of the region, and it is likely that some afternoon cumulus cloud buildups will develop there, but no thunderstorms are expected. It is possible some thunderstorms will develop there over the weekend, and any that do would be quite dry. Along the Sierra, any thunderstorms this week should remain south of the Tahoe area or outside of Northern California through the end of the week with a slight chance of a few developing there for the weekend as well. Weekend temperatures are expected to cool a bit with the warmest areas dropping to 95 to right around 100. Diurnal wind patterns will prevail in most areas, so seasonable wind speeds and directions are expected.

SOUTHERN CALIFORNIA

A weak disturbance will move to the northeast ending the shower and thunderstorm threat across Southern California today, but isolated showers and thunderstorms will continue across Central California from the Sierra eastward through this evening. Strong high pressure over Utah will maintain temperatures that are 5 to 15 degrees above normal through the day, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. Minimum humidity will be mainly between 12% and 25% away from the coastal areas today. A weak Pacific trough will move over the West Coast Thursday through this weekend bringing significant cooling to the region. Temperatures will be near normal Friday through this weekend. There will be widespread minimum humidity in the single digits and teens above and inland from the marine layer Thursday through this weekend as a dry southwest flow aloft develops. The marine layer will deepen to around 2,000 feet by Friday which will allow morning low clouds and fog to push into most coastal valley locations. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes Thursday through this weekend.
